

Benefits of 500 KW Rooftop Solar

Financial Benefit

Net metering

It allows consumer to export excess electricity from solar system to grid at tariff rate of Rs. 5.94 per unit in Nepal

Save upto about
Rs.3,19,29,398.78 in 25
years

Reinvest saved money to
boost the productivity
and overall business

Sell excess energy
through net metering to
generate income

Pay less than NEA or diesel
rate through PPA

Note: The above calculation is for a 500KW rooftop solar system in an industry that consumes 1MWh of electricity per day and has 3 Diesel generators of 66KVA, which are operated 5 days per month. The assumed tariff rate for solar electricity is Rs. 7 per unit.

Environmental Benefit

Enables carbon credits creating potential revenue generation

Reduce about 843.73 tCO₂ carbon emission during 25 years

Helps to achieve Nepal NDC and Global climate goals

Increase the brand value of the industry and attract investor

Carbon Credits

Other Benefit

Lease unused rooftop space/ land to developers, generating passive rental income.

Ensure continuous, reliable and uninterrupted energy, prevent downtime

Businesses can host solar systems through PPAs, while the developer earns stable long-term revenue.

Provide backup power for critical equipment mainly in industry and hospital

Offers high return on investment and improve consistency of services
