

COMMERCIAL AND INDUSTRIAL SOLAR

Janaki Energy Pvt. Ltd

Commercial and Industrial Solar

Commercial and industrial (C&I) solar refers to solar energy systems designed for businesses and industrial facilities, often larger and more powerful than residential solar systems. They power various commercial and industrial properties, including industries, hospitals, hotels, resorts, educational institutes, banks etc.

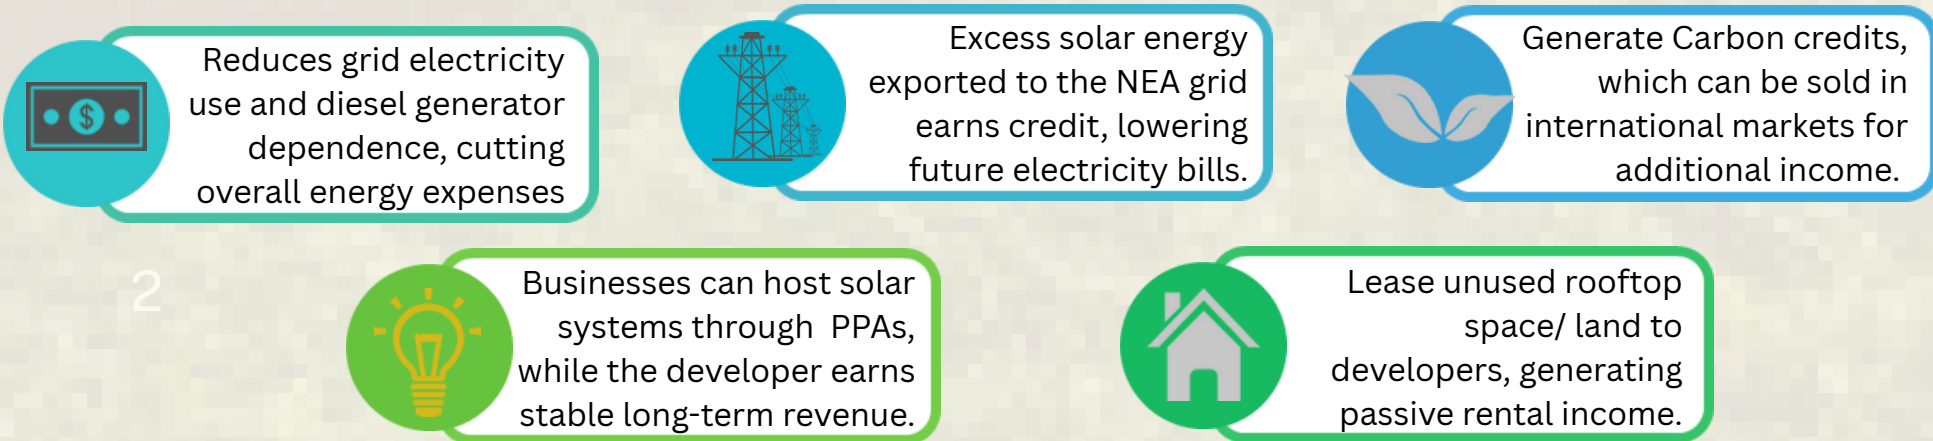

Why to choose Solar ?

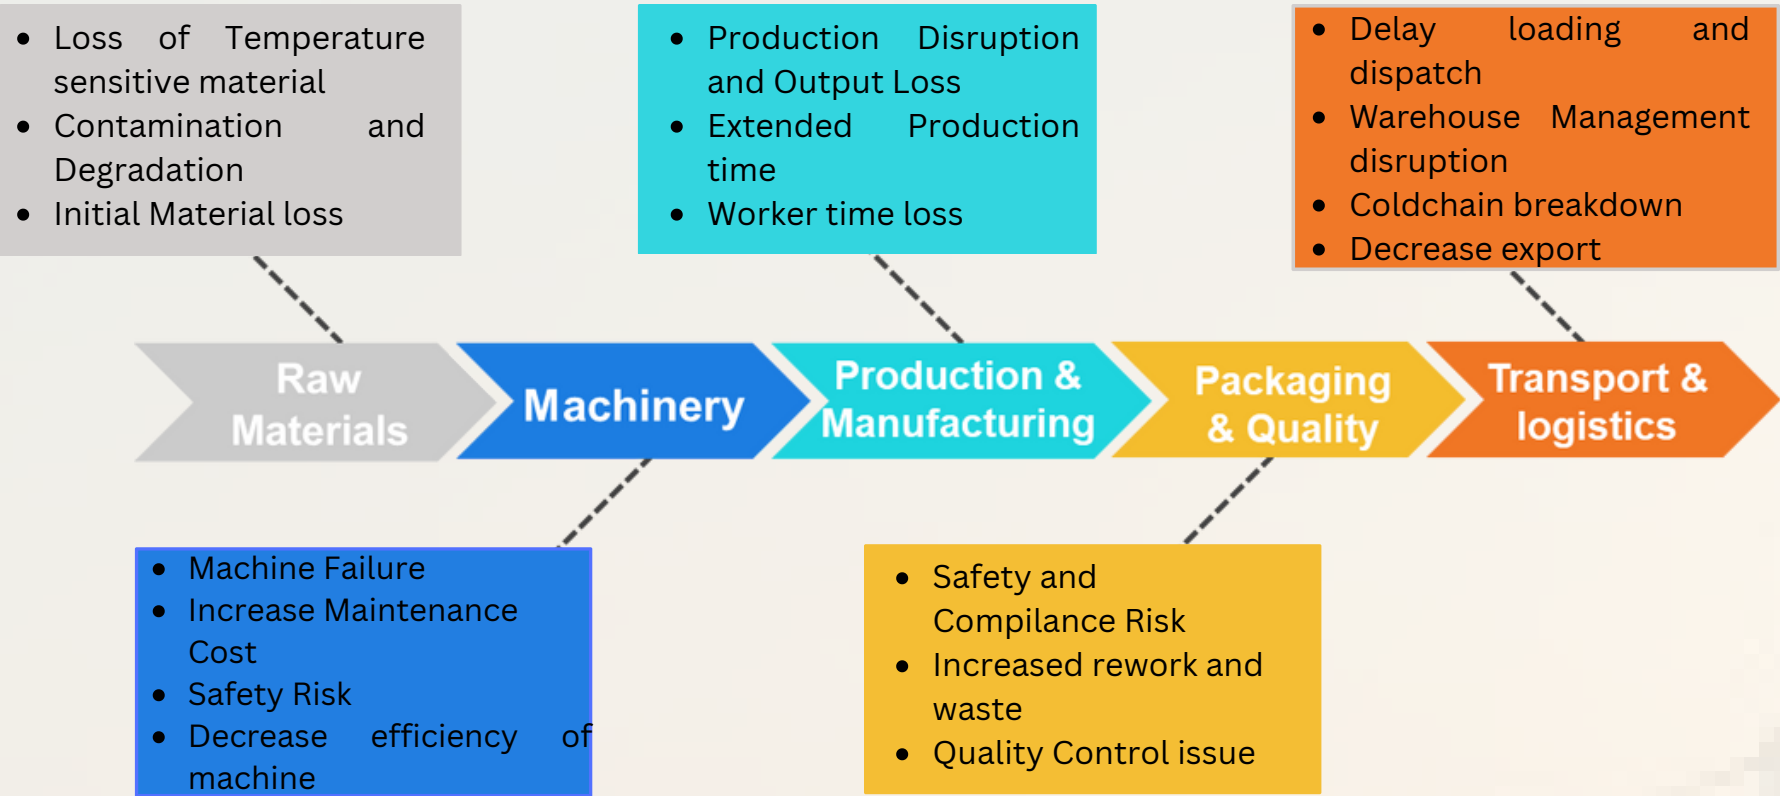

Business Model

Revenue Generation

Loss Due to Power Outage in Industry

Best Practices and Case Studies

Yak Brewing Company (Barahsinghe), Darechok

In 2023, Barahsinghe Brewery installed 910 rooftop solar panels, generating 600 kW of clean energy daily. The system meets 100% of the brewhouse’s daytime energy needs, cutting fossil fuel use and preventing over 800 tonnes of carbon emissions annually, showcasing Barahsinghe’s commitment to sustainability and quality brewing.

Chitwan Medical College, Bharatpur

Chitwan Medical College consumes 1.6 million kWh of electricity each year, spending 34 million rupees. CMC has installed 200 kWp solar system, expandable to 500 kWp, under a RESCO model. The system will reduce energy use by 23 percent and save around 57 million rupees over 15 years.

Challenges

Delays in PPA signing create uncertainty and lead to inconsistent project commissioning.

Net metering caps are restrictive: 500kW for industrial systems.

Roof constraints (irregular, weak, or shaded) limit solar capacity and complicate installations

Way Forward

Simplify PPA approvals and expand net metering limits to encourage larger solar installations.

Provide affordable financing and tax incentives to reduce the cost burden for industries.

Promote shared solar parks for businesses without suitable rooftops.

Enforce standards for solar equipment to improve reliability and system lifespan.

Invest in battery storage and grid upgrades to support stable solar integration.
